ITFS

ID CANDIDATE	ROLE	AVAILABILITY
13740	Senior Android Developer	2-3 days

PROFILE RESUME

Senior Android Developer with experience in Android, Kotlin, Java, Jetpack Compose, REST Api, MVVM, MVP, Git, Koin, RxJava 2, Firebase, Mockito and JUnit4, OkHTTP3, Android Studio, Jenkins, Bitrise, Proguard, Timber, JodaTime, Lombok, Butterknife, Crashlytics, Bash, Slack, Jira, Figma. Skilled in developing and improving Android apps for clients. Experienced in redesigning and improving apps, preparing codebases for multiple banking products, and optimizing translation and configuration services. Strong knowledge of Kotlin, Java, MVVM, Coroutines, Dagger 2, Data Binding, OkHttp, Retrofit, and Material Design. Proficient in setting up continuous integration, choosing architecture and tools, and fixing bugs. Experienced in working remotely and in Scrum methodology. Passionate about traveling and music.

KEY COMPETENCES

Skill	Years	Last used
Kotlin	5	2024
Kotlin Coroutines	5	2024
Kotlin Flows	5	2024
Android SDK	8	2024
Gradle	8	2024

TECHNICAL SKILLS

Android, Kotlin, Java, Jetpack Compose, REST Api, MVVM, MVP, Git, Koin, RxJava 2, Firebase, Mockito and JUnit4, OkHTTP3, Android Studio, Jenkins, Bitrise, Proguard, Timber, JodaTime, Lombok, Butterknife, Crashlytics, Bash, Slack, Jira, Figma

EXPERIENCE

A.Team	09-2021 – Present

Senior Android Developer

- A.Team is a members-only network that empowers the world's top engineering, product, design, and marketing builders to team up and build things that matter for the world's most exciting companies.
- Project DogeCard - Android App: Crypto banking app, that lets you buy, sell, send and gain rewards in Doge coins. I helped to redesign and improve the app and prepare it for the release. I also worked on creating a second banking product - Cause Card. Main task was to prepare the codebase to support 2 (and more in the future) separate banking products. I was also responsible for growing the Android team
- Project IRL - Android App: Adding "Audio Notes" feature - recording and sending the audio in the chat. Analyzing the audio amplitudes and showing the waveforms. Owning and fully responsible for that part of the application.

Toptal	02-2019 – Present

Senior Android Developer

- Working with great startups and companies - providing knowledge and skills to help to build and improve Android apps for the clients.
- Projects: HelloFresh - Android App - I was helping to improve the food delivery app downloaded more than 5 millions times. I was responsible for optimizing translation service (5000 keys in 20 locales) and also optimizing configuration service (with hundreds of feature toggles in 20 locales) - I achieved that mostly by code analysis, and writing bash scripts.
- Groopview - Android App - In this project I was serving as an Lead Developer - I was helping to deploy the first version of the app to the market. I was organizing the priorities in the project, finding the solutions to major technical problems and working as a communication bridge between developers and PO.
- Vimvest (currently Monorail) - Android App - I was hired to build new features and fix bugs before the final release of the app to the Google Play store. I worked remotely with other Android developers. The application helps users to achieve financial goals. Currently under the name Monorail.

CodeControl	06-2018 – 08-2019

Senior Android Developer

- Developing an insurance app for Volvo, banking app for leading German Fintech company and insurance app for major insurance groups in Germany and Europe.
- Projects: Volvo Car Protection - Android App (Link) - In a team of 2 android developers, I developed a beautifully designed application, used to easily order insurance packages for Volvo clients. Apart from developing an app, some of my tasks included also setting up a Bitrise - (Continuous Integration for a project), communicating with a design agency to discuss better usability for Android users, deploying the app to Google Play.
- Modern 'mobile-first' banking Android App (Link) - I chose MVVM as an architecture for the whole project. To support that I applied Dagger 2 (for DI) and RxJava 2 (for reactive programming and multithreading). I took a lead in shaping REST-full API endpoints for the client-side, working closely with a back-end developer. I was also reviewing designs and providing feedback from UX and Android-specific points of view which resulted in the well-thought end product.
- Modern Insurance Android App - Modern insurance app for Digital Nomads with a very user-friendly process of signing up for new insurance, built for the major insurance company. One of the main concerns in the project was the security and privacy of the user's data (medical data has the highest security level). As an only Android developer in the project, I was responsible for the whole development, choosing architecture and tools and shaping REST-full API endpoints.
- Coworking - Android App (Link) - Application for searching and reserving coworking spaces for Code Control community members.

Freelancer	05-2016 – Present

Senior Android Developer

- Creating custom mobile applications. Gathering requirements from clients, plan sprints, helping with graphical design, developing, testing, deploying and support of the application.
- Project: MyChat – Social application for Myanmar - Android App
- Project: Message – boardgame converted to tablet Android App
- Project: BHP - Helper for board game - Android App

Camlin Technologies	10-2016 – 09-2017

Senior Mobile Developer

- Participating in the whole process of creation of mobile applications: from designing, through developing and testing to deploying and maintaining
- Project: Equipment Manager - Android App
- Project: REZAP - Cross-platform Mobile App
